Cardiology Science Lunch Berlin
a weekly exchange of insights and ideas in cardiovascular medicine

Muscle, Fat and Metabolism in Heart Failure
The Whole Body Perspective on Disease and Therapy

Prof. Wolfram Döhner
Centrum für Schlaganfallforschung Berlin - Charité

Heart Failure is recognized as a systemic syndrome but little attention is given to whole body metabolic implications of the disease. Insights on energy failure, anabolic blunting, and muscle wasting are growing and novel therapies with specific metabolic targets are emerging for clinical testing.

Advancing metabolic paradigms of HF will be presented and discussed. State of the art clinical methods (such as microdialysis and OROBOROS Oxygraph) will be outlined and innovative concepts for metabolic research in HF will be presented.

Wednesday, 18.11.2015
12:00 – 13:00h

Bibliothek at DHZB
Augustenburger Platz 1, Berlin
