Epidemiology and Risk Assessment in Heart Failure – Novel insights from the Framingham Study

Prof. Vasan Ramachandran, MD, DM, FACC, FAHA
Section of Preventive Medicine and Epidemiology
Boston University School of Medicine, USA

The prevalence and disease burden of heart failure is increasing. Early diagnosis and risk assessment are pivotal for patient management for therapy as well as prophylaxis. Spanning already more than 3 generations of patients the Framingham Heart Study provides cutting edge cardiovascular research fundamentally shaping public health guidelines worldwide. As principal investigator of the Framingham Heart Study Prof. Ramachandran will discuss the impact of epidemiology on heart failure management and latest trends in risk assessment.
